

Projekt : HIPP Verpackung
obere Staublaschen verlängert (TW 161104)
Schraffierte Flächen farb- und lackfrei!
Haltepunkte mit Produktion abstimmen!

Preparation

Please pay careful attention to the instructions when preparing milk formula. Incorrect preparation or storing a prepared feeding bottle for a longer period of time can be harmful to health, e.g. due to undesired bacterial growth. For this reason, always prepare the formula from scratch before every meal and feed immediately. Do not re-use leftovers. Clean bottle, teat and ring thoroughly. Close the opened sachet tightly after every use, store in a dry place at room temperature (max. 25 °C) and use up within 3 weeks.

Please do not warm up milk formula in the microwave oven (danger of scalding).

Boil fresh drinking-water and leave it to cool down to approx. 40°–50 °C*.

Pour 2/3 of the prepared water into the feeding bottle.

Fill the measuring spoon loosely and level with the back of a knife. Put the recommended amount of powder into the feeding bottle.

* To prevent the natural lactic acid cultures (lactobacilli) from being harmed, please do not prepare formula with too hot water.

Note: As an alternative to the usual milk teat, you can also use a teat with a big hole.

Drinking amount & dosing

The drinking amount per feeding bottle may vary from baby to baby. The recommended drinking amounts and the number of bottles per day are guideline values. Your baby does not necessarily have to empty the feeding bottle completely. Please use the enclosed measuring spoon only!

Age	Bottle feeds per day	Ready-to-drink product, ml	Dosage per meal	
			Boiled water, ml	Measuring spoon
1 st week to 2 nd week*	5 – 7	70	60	2
3 rd to 4 th week	5 – 7	100	90	3
5 th to 6 th week	5 – 6	135	120	4
7 th to 8 th week	5	170	150	5
3 rd to 4 th month	5	200	180	6
from the 5 th month**	5	235	210	7

Use 30 ml boiled water per measuring spoon

* Unless otherwise recommended by a paediatrician.

** From the 5th month onward, you can introduce jars and paps after consulting your paediatrician.

Babies need about 5 meals a day. With every newly introduced jar or pap meal, you should drop one bottle feeding.

Important information

- Breast is best for your baby. Please consult your maternity clinic or your paediatrician if you want to use a special formula.
- Please only use special formulae under medical supervision.
- HIPP AR Organic Special Formula is suited as a dietary treatment for increased spitting up or burping in infants and can be used under medical supervision from birth onward for the exclusive nutrition of your baby as well as from 6 months as part of a mixed diet.
- HIPP AR Organic Special Formula is not suitable for babies at risk of allergies. Please consult with your paediatrician.
- HIPP AR Organic Special Formula should make your baby feel better after a few days. Should you notice no improvement of the symptoms, please consult with your paediatrician again.
- Just like breast milk, infant formulae also contain carbohydrates. They are an important part of your baby's nutrition. Permanent contact of your baby's teeth with food containing carbohydrates may lead to severe tooth decay. Therefore, do not leave the bottle to your child for permanent sucking and let your child drink from a cup as early as possible.
- Not suitable for parenteral use.

Organic production in HiPP Top Quality

Out of conviction, we firmly believe in strictly controlled organic ingredients. With regard to the choice of raw materials, we clearly exceed the strict statutory requirements for milk formulae. We guarantee the highest possible safety for you and your baby by means of very strict quality controls starting with the raw materials right through to the finished product.

The HiPP organic seal guarantees the highest quality and exceeds the EU organic requirements.
